

T3 - Folded toilet system

Think ahead.

Tork Soft Folded Toilet Paper

Article	114273
System	T3 - Folded toilet system
Colour	White
Ply	2
Unfolded length	19 cm
Unfolded width	11 cm
Folded length	9.5 cm
Folded width	11 cm
Print	No

Tork Folded Toilet Paper dispensers offer hygienic sheet-by-sheet dispensing that reduces waste and maintenance costs. Tork Soft Folded Toilet Paper Premium offers a superior look and feel, and performance. This system is ideal for low to medium traffic locations, especially in healthcare and Horeca environments.

Key benefits:

- One-at-a-time dispensing for reduced consumption and increased hygiene
- Soft tissue with high brightness for a lasting impression
- Easy to refill: less maintenance

Environmental

Production

This product is produced at SKELMERSDALE mill, GB and certified according to ISO 9001, ISO 14001 (Environmental management systems), OHSAS 18001 and FSC Chain-Of-Custody.

Content

The product is made from

Chemicals

All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view.

Essity UK Ltd, Southfields Road,
Dunstable, Bedfordshire LU6 3EJ,
United Kingdom

In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:

The packaging material is made from paper or plastic.

High product quality is secured through quality and hygiene management systems throughout production, storage and transport.

- Wet strength agents (for Wipers and Hand Towels)
- Dry strength agents (are used together with mechanical treatment of the pulp to make strong products like wipers)
- For coloured papers dyes and fixatives (to secure perfect fastness of the colour) are added
- For printed products printing inks (pigments with carriers and fixatives) are applied
- For multi ply products we often use water soluble glue to secure the integrity of the product

Environmental certification

In most of our mills we do not add optical brighteners but it often occurs in recovered paper since it is used in printing paper.

For bleached products we use bleaching agents (to increase the brightness of pulp from recovered paper).

To control product performance we use additives:

Recycling of paper is an efficient use of resources as the wood fibres are used more than once.

Recycled fibres

Chemicals

Bleaching is a cleaning process of the fibres that is often used. The aim is then to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety.

- Pulping aid (chemicals that help to repulp wet strong paper)
- Flocculation chemicals (that help to clean out printing inks and fillers from recovered paper)
- Bleaching agents (to increase the brightness of pulp from recovered paper)

- defoamers (surfactants and dispersing agents)
- pH-control (sodium hydroxide and sulphuric acid)
- retention aids (chemicals that help to agglomerate small fibres to prevent fibre loss)
- Coating chemicals (that help to control the creping of the paper to make it soft and absorbent)

This product is certified for FSC®.

To reuse broke and to utilise recovered fibres we use:

Destruction

This product is suitable to be taken care of in the normal sewage system of the community.

Recovered paper can be produced both from collected newsprint, magazines and office waste. The choice of recovered paper grades, is made for each product, depending on its specific requirements on performance properties and brightness. The paper is dissolved in water, washed and treated with chemicals under high temperature and screened to separate out impurities.

Packaging

Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes
