Tork Wiping Paper

Article	130034
System	M2 - Centerfeed system big
Colour	White
Ply	1
Roll length	165 m
Roll width	19.5 cm
Roll diameter	19 cm
Number of sheets	471
Sheet length	35 cm
Embossing	No
Print	No

The 1-ply multipurpose Tork Wiping Paper is strong and extra absorbent, which makes it ideal for wiping tasks and hand wiping. This paper can be used in the Tork® Centrefeed dispenser, which is a high capacity versatile solution for professional environments where both hand and surface wiping is required.

Key benefits:

- Particularly good for cleaning glass - does not leave any lint or streaks on surfaces
- Operable with one hand makes it easy to use

Production

This product is produced at KOSTHEIM mill, DE and certified according to HACCP, ISO 9001, ISO 14001 (Environmental management systems), OHSAS 18001, EMAS (eco-management and audit scheme), ISO 50001 and FSC Chain-Of-Custody.

Chemicals

All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view.

Essity UK Ltd, Southfields Road, Dunstable, Bedfordshire LU6 3EJ, United Kingdom

We do not use softeners for professional hygiene products.

- defoamers (surfactants and dispersing agents)
- pH-control (sodium hydroxide and sulphuric acid)
- retention aids (chemicals that help to agglomerate small fibres to prevent fibre loss)
- Coating chemicals (that help to control the creping of the paper to make it soft and absorbent)

- Wet strength agents (for Wipers and Hand Towels)
- Dry strength agents (are used together with mechanical treatment of the pulp to make strong products like wipers)
- For coloured papers dyes and fixatives (to secure perfect fastness of the colour) are added
- For printing products printing inks (pigments with carriers and fixatives) are applied
- For multi ply products we often use water soluble glue to secure the integrity of the product

Virgin pulp fibres are produced out of softwood or hardwood. The wood is subject to chemical and/or mechanical processes where the cellulose fibres are separated out and lignin and other residuals are removed.

Virgin pulp

Bleaching is a cleaning process of the fibres and the aim is to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety.

Material

Virgin fibres

Environmental certification

In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:

There are different methods used today for bleaching: ECF (elementary chlorine free, where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used.

High product quality is secured through quality and hygiene management systems throughout production, storage and transport.

In most of our mills we do not add optical brighteners.

- Pulping aid (chemicals that help to repulp wet strong paper)

Food Contact

This product fulfills the legislative requirements for Food Contact materials, confirmed by external certification performed by a third party. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.

This product is certified for FSC®.

To reuse broke we use:

Packaging

Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes
