

H3 - C-fold and ZZ-fold system

Think ahead.

Tork Singlefold Hand Towel Advanced

Article	290163
System	H3 - C-fold and ZZ-fold system
Colour	White

Satisfy hand drying needs with the Advanced Tork Singlefold Hand Towels with the right quality for when cost and performance are equally important. These towels are suitable for the Tork Singlefold Hand Towel Dispenser for demanding environments. Help control consumption and promote good hygiene with reliable one-at-a-time dispensing.

Key benefits:

- Attractive Tork Leaf décor: designed to make a great impression
- Advanced quality for cost savings and high performance
- One-at-a-time dispensing for reduced consumption and increased hygiene

United Kingdom

This product is certified for the EU Ecolabel.

Destruction

This product is mainly used for personal hygiene and can be collected together with household waste. There are different methods used today for bleaching: ECF (elementary chlorine free, where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used. Recycling of paper is an efficient use of resources as the wood fibres are used more than once. High demands are put on quality and purity of recovered fibres, considering each step of the chain (collection, sorting, transportation, storage, use), to ensure safe and hygienic products. In most of our mills we do not add optical brighteners but it often occurs in recovered paper since it is used in printing paper. We do not use softeners for professional hygiene products. In the cleaning of our waste water we use flocculation agents and nutrients for the biological treatment to secure that no negative impact on water quality comes from our mills. In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:

- Pulping aid (chemicals that help to repulp wet strong paper)
- Flocculation chemicals (that help to clean out printing inks and fillers from recovered paper)
- Bleaching agents (to increase the brightness of pulp from recovered paper)

Article creation date and latest article revision

Date of issue: 19-04-2019

The packaging material is made from paper or plastic.
This product is certified for FSC®.
Virgin pulp fibres are produced out of softwood or hardwood. The wood is subject to chemical and/or mechanical processes where the cellulose fibres are separated out and lignin and other residuals are removed.

Packaging

Fulfillment of Packaging and Packaging Waste Directive (94/62/EC): Yes

Material

Virgin fibres and recovered paper
To reuse broke and to utilise recovered fibres we use:

Food Contact

This product fulfills the legislative requirements for Food Contact materials, confirmed by external certification performed by a third party. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.

Environmental certification

Virgin pulp
Recycled fibres
Chemicals

Production

This product is produced at KOSTHEIM mill, DE and certified according to HACCP, ISO 9001, ISO 14001 (Environmental management systems), OHSAS 18001, EMAS (eco-management and audit scheme), ISO 50001 and FSC Chain-Of-Custody. In the tissue process both virgin fibres and recovered paper are being used. The choice of pulp is made based on product requirements and pulp availability so the pulp is used in the most efficient way. Bleaching of the recovered pulp is made with chlorine-free bleaching agents (hydrogene peroxide and sodium dithionite).
